

Sales Store Dataset

Data-only version

Store Background

A retail store chain tracks daily sales transactions, including order details, customer information, product categories, order times, and order status. The business wants to optimize operations, improve customer experience, and increase profitability using data-driven decisions.

Problem

The store needs proper reports and simple insights to understand sales, customers, and product performance better. Without these insights, the business may miss opportunities to earn more, lose customers, and make poor business decisions.

Problem Statement

The store does not have a clear idea about which products sell the most, customers' preferences, which items bring in the most profit, and where things are going wrong in delivery or operations.

Why It Needs to Be Solved

Without proper insights: Missed sales opportunities; poor inventory and staffing decisions; increased operational costs; low customer satisfaction; inaccurate business forecasts.

Expected Impact

Solving this will help increase revenue, improve service quality, and optimize operations.

Stakeholders

Store Manager — To improve daily operations and sales performance.

Inventory Team — To plan stock refilling based on demand.

Marketing Team — To target promotions and loyalty programs.

Logistics Team — To address delivery delays and optimize routes.

Finance Team — For profit analysis and revenue forecasting.

Senior Management — To set business strategy and growth plans.

Business Problems / Questions

1. What are the top 5 most selling products by quantity?
2. Which products are most frequently canceled?
3. Who are the top 5 highest spending customers?
4. Which product categories generate the highest revenue?
5. What is the return/cancellation rate per product category?
6. What is the most preferred payment mode?
7. How does age group affect purchasing behavior?

8. What's the monthly sales trend?

9. Are certain genders buying more specific product categories?

10. What time of the day has the highest number of purchases?
